DETAILED ACTION

1. Amendment filed on 06/20/2005 has been entered.
2. Claims 1-44 are presented for examination.

Response to Arguments

3. Applicant's arguments with respect to claims 1-44 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

- The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).
5. Claims 1-44 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by Nobunaga et al. (U.S. Patent No. 6,304,510).

Regarding claims 1-3, 9-44, Nobunaga et al. disclose a system (Figure 1), comprising:

a controller (Figure 1, 200); and

a memory device (100) coupled to the controller to receive signals (Figure 1)

therefrom, and comprising:

an array of memory cells (Figure 1, Memory Array) arranged in a plurality of addressable banks (BANK0-4, Column 2, lines 66-67), each bank comprises addressable rows and columns of memory cells (Column 2, lines 3-4);

a mode register (Figure 1, 130, MODE REGISTER); and

address circuitry (Figure 5, Column 6, lines 12-24) coupled to the mode register to configure the addressable banks in response to a program state of the mode register (Column 4, lines 26-43). More specifically, regarding claims 2-3, Nobunaga et al. disclose wherein the addressable banks can be configured as either four or eight banks (Figure 1, four banks BANK0-BANK3), and the address circuitry selectively routes address signal to either a row decoder or bank decoder (118) in response to the mode register (Column 4, lines 4-67, Column 5, lines 1-35).

Regarding claims 4-8, Nobunaga et al. clearly disclosed as discussed above, and the array of X memory cells is Y banks, each having X/y memory cells, and a second state of mode register configures the array into Z banks each having X/Z memory cells (Column 3, lines 64-67, Column 4, lines 1-15, lines 44+ TABLE 1), and wherein the address circuitry comprises column row and bank address decoders (Figure 1, 118, 122), and the address circuitry comprises a multiplex circuit (Figure 1, 117).
